Art Unit: 1714

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 3-6 and 14-20 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

The recited "and with proviso that said anion is organic or fluoroorganic when said cation is a metal" in claims 3-6 is redundant and confusing since the amended claims do not have a metal as a cation.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 4, 16 and 17 are rejected under 35 U.S.C. 103(a) as being unpatentable over Burnie et al (US 3,766,123) in view of Mueller (US 3,968,066).

Burnie et al teach method of rendering hydrophobic the surface of an aircraft windshield by applying a composition comprising a cationic amino chemical (quaternary ammonium compound) and trichlorotrifluoroethane in abstract. Said trichlorotrifluoroethane meets the instant fluorochemical repellent, and said cationic amino chemical containing an organo onium cation is taught at col. 4, lines 58-73.

The instant invention further recites different anions for said cationic amino chemical of Burnie et al. However, the instant anions for said cationic amino chemical

are well known in the art as taught by Mueller, col. 2, lines 16-67 wherein fluoride, alkylsulfate and sulfonate are taught. Thus, use of alkane- or aryl- sulfonate would be obvious since said sulfonate encompasses various sulfonates.

It would have been obvious to one skilled in the art at the time of invention to utilize the art well known quaternary ammonium compound having the instant anion of Mueller in Burnie et al. since Burnie et al. teach employing a quaternary ammonium compound and since use of a quaternary ammonium compound having the instant anion in water-repelling composition, and thus making a surface of a substrate hydrophobic is well known practice as taught by Mueller absent showing otherwise.

Claims 7-13 are allowed.
